

treated in emergency departments for poisoning every day, and more than 130 children 19 years of age and younger die as a result of being poisoned each year;

Whereas, in 2019, children younger than 6 years of age constituted 43 percent of all poison exposures;

Whereas, from 2000 to 2018, data from poison control centers revealed a significant increase of an average of 3.4 percent per year in the number of intentional suicide patients who were adolescents 10 to 24 years of age, and that increase disproportionately occurred among females;

Whereas, in 2021, poison control centers are seeing an increase in suspected suicides in individuals ranging from 11 to 14 years of age;

Whereas, in 2019, more than 114,000 children 19 years of age and younger were treated in an emergency room due to unintended pediatric poisoning, and more than 90 percent of those incidents occurred in the home, most often with blood pressure medications, acetaminophen, laundry packets, bleach, or sedatives or anti-anxiety medication;

Whereas there was a 444 percent increase in pediatric magnet ingestion cases reported to United States poison control centers from 2018 to 2019 based on an analysis of the National Poison Data System (NPDS), demonstrating the significant risk of injury from high-powered magnet ingestions;

Whereas 70,237 cases of death due to drug overdose were reported in the United States in 2017, and the majority of those cases, approximately 68 percent, involved an opioid;

Whereas, in 2019, the most common medications that adults called the poison help line about were prescription and non-prescription pain relievers, household cleaning substances, cosmetics and personal care products, and antidepressants;

Whereas pain medications lead the list of the most common substances implicated in adult poison exposures, and are the single most frequent cause of pediatric fatalities reported to the AAPCC;

Whereas poison control centers issue guidance and provide support to individuals, including individuals who experience medication and dosing errors;

Whereas more than 60 percent of calls to the poison help line are from individuals 20 years of age or older, with more than half of those calls involving patients older than 50 years of age, and a common reason for those calls is therapeutic errors, including questions regarding drug interactions, incorrect dosing route, timing of doses, and double doses;

Whereas normal, curious children younger than 6 years of age are in stages of growth and development in which they are constantly exploring and investigating the world around them, and are often unable to read or recognize warning labels;

Whereas the AAPCC engages in community outreach by educating the public on poison safety and poisoning prevention, and provides educational resources, materials, and guidelines to educate the public on poisoning prevention;

Whereas individuals can reach a poison control center from anywhere in the United States by calling the poison help line at 1-800-222-1222;

Whereas, despite regulations of the Consumer Product Safety Commission requiring that a child-resistant package be designed or constructed to be significantly difficult for children under 5 years of age to open, or obtain a harmful amount of the contents, within a reasonable time, children can still open child-resistant packages; and

Whereas, each year during National Poison Prevention Week, the Federal Government assesses the progress made by the Federal

Government in saving lives and reaffirms the national commitment of the Federal Government to preventing injuries and deaths from poisoning; Now, therefore, be it

*Resolved*, That the Senate—

(1) recognizes the week of March 21 through March 27, 2021, as “National Poison Prevention Week”;

(2) expresses gratitude for the people who operate or support poison control centers in their local communities;

(3) expresses gratitude for frontline workers supporting poison prevention during the COVID-19 pandemic;

(4) supports efforts and resources to provide poison prevention guidance or emergency assistance in response to poisonings; and

(5) encourages—

(A) the people of the United States to educate their communities and families about poison safety and poisoning prevention; and

(B) health care providers to practice and promote poison safety and poisoning prevention.

#### SENATE RESOLUTION 145—DESIGNATING THE FIRST WEEK OF APRIL 2021 AS “NATIONAL ASBESTOS AWARENESS WEEK”

Mr. TESTER (for himself, Mr. MCKINLEY, Mr. WHITEHOUSE, Mr. DAINES, Mr. CARPER, and Mr. DURBIN) submitted the following resolution; which was considered and agreed to:

S. RES. 145

Whereas dangerous asbestos fibers are invisible and cannot be smelled or tasted;

Whereas the inhalation of airborne asbestos fibers can cause significant damage;

Whereas asbestos fibers can cause cancer (such as mesothelioma), asbestosis, and other health problems;

Whereas symptoms of asbestos-related diseases can take between 10 and 50 years to present themselves;

Whereas the projected life expectancy for an individual diagnosed with mesothelioma is between 6 and 24 months;

Whereas little is known about late-stage treatment of asbestos-related diseases, and there is no cure for those diseases;

Whereas early detection of asbestos-related diseases may give some patients increased treatment options and may improve the prognoses of those patients;

Whereas, although the consumption of asbestos within the United States has been substantially reduced, the United States continues to consume tons of the fibrous mineral each year for use in certain products;

Whereas thousands of people in the United States have died from asbestos-related diseases and thousands more die every year from those diseases;

Whereas, although individuals continue to be exposed to asbestos, safety measures relating to the prevention of asbestos exposure have significantly reduced the incidence of asbestos-related diseases and can further reduce the incidence of those diseases;

Whereas thousands of workers in the United States face significant asbestos exposure, which has been a cause of occupational cancer;

Whereas a significant percentage of victims of asbestos-related diseases were exposed to asbestos on naval ships and in shipyards;

Whereas asbestos was used in the construction of a significant number of office buildings and public facilities built before 1975;

Whereas people in the small community of Libby, Montana, suffer from asbestos-related

diseases, including mesothelioma, at a significantly higher rate than individuals in the United States as a whole; and

Whereas the designation of a “National Asbestos Awareness Week” will raise public awareness about the prevalence of asbestos-related diseases and the dangers of asbestos exposure; Now, therefore, be it

*Resolved*, That the Senate—

(1) designates the first week of April 2021 as “National Asbestos Awareness Week”;

(2) urges the Surgeon General of the United States to warn and educate people about the public health issue of asbestos exposure, which may be hazardous to their health; and

(3) respectfully requests that the Secretary of the Senate transmit a copy of this resolution to the Office of the Surgeon General.

#### SENATE RESOLUTION 146—DESIGNATING APRIL 2021 AS “SECOND CHANCE MONTH”

Mr. PORTMAN (for himself and Ms. KLOBUCHAR) submitted the following resolution; which was referred to the Committee on the Judiciary:

S. RES. 146

Whereas every individual is endowed with human dignity and value;

Whereas redemption and second chances are values of the United States;

Whereas millions of citizens of the United States have a criminal record;

Whereas hundreds of thousands of individuals return to their communities from Federal and State prisons every year;

Whereas individuals returning from Federal and State prisons have paid their debt for committing crimes but still face significant legal and societal barriers (referred to in this preamble as “collateral consequences”);

Whereas collateral consequences for an individual returning from a Federal or State prison are often mandatory and take effect automatically, regardless of—

(1) whether there is a nexus between the crime and public safety;

(2) the seriousness of the crime;

(3) the time that has passed since the individual committed the crime; or

(4) the efforts of the individual to make amends or earn back the trust of the public;

Whereas, for individuals returning to their communities from Federal and State prisons, gaining meaningful employment is one of the most significant predictors of successful reentry and has been shown to reduce future criminal activity;

Whereas many individuals who have been incarcerated struggle to find employment because of collateral consequences, which are often not directly related to the offenses the individuals committed or any proven public safety benefit;

Whereas many States have laws that prohibit an individual with a criminal record from working in certain industries or obtaining professional licenses;

Whereas, in addition to employment, education has also been shown to be a significant predictor of successful reentry for individuals returning from Federal and State prisons;

Whereas an individual with a criminal record often has a lower level of educational attainment than the general population and has significant difficulty acquiring admission to, and funding for, educational programs;

Whereas an individual who has been convicted of certain crimes is often barred from receiving the financial aid necessary to acquire additional skills and knowledge;

Whereas an individual with a criminal record—
